

K-Commander® Tracking Discs

The **K-Commander® Tracking Discs** are a high-performance economical means to track and align a wandering conveyor belt, which is suitable for most installations and bulk materials handling applications.

The K-Commander® MTD Disc Tracker fits both flat and vee return rollers as well as troughing rollers. Ideally, they are located in pairs prior to the tail pulley to help align the conveyor belt, and so eliminating spillage from tracking belts. They can also be installed after the feed area on the troughing sets to help keep the belt aligned.

Key Benefits:

- Easy installation - split on one side to slip over the roller. No need to remove rollers.
- High wear resistant grade of Polyurethane used.
- No damage to belt edges.

Installation Notes:

To ensure optimal installation, please consider custom frame and wider face roller height clearance levels.
